

PRESS RELEASE

Stackpole's RNCP Series for High Power Anti-Sulfur Applications

RALEIGH, NC (May 8, 2013) – The RNCP series from Stackpole has no silver or other susceptible metals in the terminations to cause sulfur contamination. In addition, the thin film resistive element provides outstanding stability and higher power ratings compared to commodity thick film chip resistors. The RNCP is truly environmentally “green” because it doesn’t require the use of a lead containing dielectric glass.

The RNCP does not use any precious metals and utilizes a high volume thin film process to minimize cost. These features make this series ideal for automotive and industrial control applications, construction and heavy equipment, power supplies, and anywhere sulfur contamination is a concern.

The RNCP is available in sizes from 0402 through 1206, in 1% and 5% tolerances with 100 ppm TCR. Pricing varies with size and tolerance, and ranges from \$0.002 to \$0.01 each for full package quantities. Contact Stackpole or one of our franchised distributors for volume pricing. Current lead-times are 8 weeks. Many popular sizes and values are in stock.

For more information about Stackpole products, contact Stackpole Electronics, Inc. at 2700 Wycliff Road Suite 410, Raleigh NC 27607; phone 919-850-9500; email marketing@seiselect.com; or visit the website at www.seiselect.com.

Stackpole Electronics Inc. is a leading global manufacturer of resistors supplying the world's largest OEMs, contract manufacturers and distributors. Headquartered in Raleigh, N.C., the privately held company began manufacturing in 1928 as part of Stackpole Carbon Company in St. Mary's, Pennsylvania. Now part of the Akahane Stackpole Manufacturing Group (ASMG), Stackpole has manufacturing facilities in Japan, Taiwan, China and Mexico; warehousing facilities in El Paso, Shenzhen and Japan; and international sales offices in Tokyo, Taipei, London, Hong Kong and Shenzhen.
